

Waterfall Model - Project Flow

Client Requirement

Based on Client Requirement. Service Provider create:

RFP - (Request for Proposal)

RFP Short list (Client)

Shortlisted Service Providers will create:

POC (Proof Of Concept) (Prototype/Dummy Software)

POC Short list (Client)

Final Selection Done

SOW(Scope of Work) Sign off Between Client and Service Provider (Product, Money)

Person Responsible - BA/SE (Business Analyst / System engineer) For Requirement Gathering

BRD (Business Requirement Document)

FSR (Function Requirement Document)

HLD (High Level Design Document) Technical

HLD Review Call With Developer

HLD Review Document (All Stake Holder Will Do Signature and finalize)

Person Responsible - Developer

AD Document (Artifact Design)

AD Review Call with BA/SE (Business Analyst / System engineer)

AD Review Document (All Stake Holder Will Do Signature and finalize)

Development Coding

Development Package (Unit Test Cases)

Development Package Review Call with BA/SE and Testers

Development Package Review Document (All Stake Holder Will Do Signature and finalize)

ST (System Testing) Handoff (Developer will explain code to Tester)

Move Code from Dev Environment to ST

Note : ISO Certified Process - There should be four environments:

Development; Test; UAT; Production

Person Responsible - Tester

Test Package Document (Test Cases)

Test Package Review Call with BA/SE and Developer

Test Package Review Document (All Stake Holder Will Do Signature and finalize)

Test Cases will be upload to Quality Control (QC)

Testing Start

Bug Detected - MR (Modification Request) Raised - Assigned to Developer - need to be fixed ASAP

Bug Detected Out of Requirement - CR (Change Request) Raised - Assigned to Developer - Can be fixed in next release

UAT (User Acceptance Testing) Handoff Tester will explain code to User)

Move Code from ST Environment to UAT

Person Responsible - User

UAT (User Acceptance Testing) Start

Bug Detected - MR (Modification Request) Raised - Assigned Tester and which in turn Assigned to Developer - need to be fixed ASAP

Bug Detected Out of Requirement - CR (Change Request) Raised - Assigned Tester and which in turn Assigned to Developer - Can be fixed in next release

UAT Done

At specific day and time, Code will move from UAT to Production and That is Call Deployment

That Day : Developer, Tester and User together will come into picture and they will do the testing in Production environment

Bug Detected, need to be fixed ASAP

Production - GO Live

Support and Maintenance Phase

Bug Detected - CR Raised and Assigned to Support People - They will take care of that ticket. Its an ongoing process.
