

PROJECT MANAGEMENT SESSION

TOPIC – SDLC & TESTING

Software Development Life Cycle (SDLC) is a process used by the software industry to design, develop and test high quality softwares.

The **Waterfall model** is the earliest SDLC approach that was used for software development.

5 Original Phases of System Development Life Cycle

1. Planning
2. Creating
3. Developing
4. Testing
5. Deploying.

7 Phases of SDLC

The new seven phases of SDLC include

1. Planning
2. Analysis
3. Design
4. Development
5. Testing
6. Implementation
7. Maintenance.

TRICK TO REMEMBER: PAD DT IM (**PAD** Doc**T**or ne bola **IM**p hai)

The first and basic phase of software development life cycle is requirements gathering. They **give clear, concise and agreed set of customer requirements that the software should provide.**

Business analyst and subject experts are responsible for requirement gathering process.

Agile methodology

The Agile methodology is a way to **manage a project by breaking it up** into several phases.

A sprint is a short time period when a team works to complete a set amount of work.

TESTING

When the software is ready, it is sent to the testing department where Test team tests it thoroughly for different defects. The testing team starts testing the functionality of the entire system. This is done to verify that the entire application works according to the customer requirement.

Black Box Testing

Black Box Testing is a software testing method in which the functionalities of software applications are tested without having knowledge of internal code structure and internal paths. Black Box Testing mainly focuses on input and output of software applications.

White Box Testing

White box testing techniques analyze the internal structures the used data structures, internal design, code structure and the working of the software rather than just the functionality as in black box testing.

Gray Box Testing is a software testing method, which is a combination of both White Box Testing and Black Box Testing method.

- In White Box testing internal structure (code) is known
- In Black Box testing internal structure (code) is unknown
- In Grey Box Testing internal structure (code) is partially known
